

BEAM Pro Table Top Mount Quick Start Guide

The BEAM Pro Table Top Mount Kit is designed to provide flexible placement options for BEAM Pro that best fit the user. Mounting BEAM Pro vertically decreases the footprint, making it less intrusive and more versatile.

Table Top Mount Includes*:

Step 1

- Insert cap and push screw into the non threaded end of the aluminum bar.

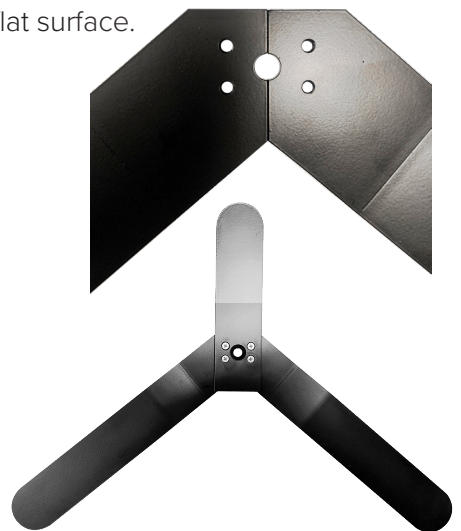

- Using a flat surface, place the two long feet so the ends meet up as pictured below.

Note: Ensure the curves of the feet are going up when placed on a flat surface.

- Place the short foot on top with the countersink facing up.
- Using the four small screws, attach the feet.

- Place the feet on the end of the aluminum bar with threading, and using the large screw, attach the feet to the bar.

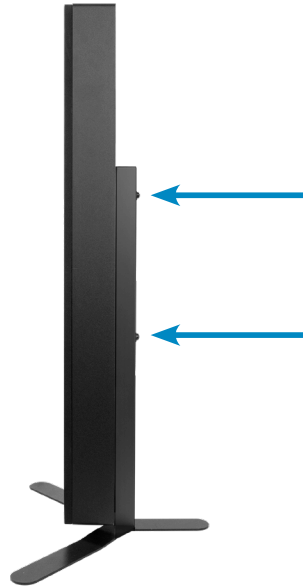

Note: Ensure the short foot is facing away from the "T Channel".

- Place foam pads that are provided in the location designated.

Step 2

- Position the stand upright, with the controls on the top, and line up the holes on BEAM Pro with holes in the extruded aluminum. Install screws and ensure they are tight.

Final

The final assembly should look like this once finished.
